

Appl. No. 10/020,529
Amdt. Dated July 11, 2005
Reply to Office Action of April 20, 2005

Docket No. EN11358
Customer No. 27940

AMENDMENTS TO THE SPECIFICATION:

Please replace the paragraph beginning at page 5, line 13, with the following paragraph:

A leaf spring 22 provides a rotational force that causes the rotational member 10 to open a predetermined amount. This amount is determined by a hard stop disposed on the rotational member 10. The hard stop meets causes rotation to cease. In one preferred embodiment, the angle is between 0 and 90 degrees. The angle is preferably 25 degrees for optimum presentation of an electronic device to a user when the latching apparatus is mounted in an automotive console between the driver's and passenger's seats.
